Cement does not meet the criteria for PBT or vPvB in accordance with Annex XIII of REACH (Regulation (EC) No 1907/2006).

When cement reacts with water, for instance when making concrete or mortar, or when the cement becomes damp, a strong alkaline solution is produced. Due to the high alkalinity, wet cement may provoke skin and eye irritation.

Chronic Toxicity ND

12. ECOLOGICAL INFORMATION

Do not disperse the product in the environment.

Waste waters and residues do not have to be poured into drains, into the ground or in watercourses.

The product is not hazardous to the environment. Ecotoxicological tests with cement on *Daphnia magna* [Reference (5)] and *Selenastrum coli* [Reference (6)] have shown little toxicological impact. Therefore LC50 and EC50 values could not be determined [Reference (7)]. There is no indication of sediment phase toxicity [Reference (8)]. The addition of large amounts of cement based material to water may, however, cause a rise in pH and may, therefore, be toxic to aquatic life under certain circumstances.

13. INFORMATION ON DISPOSAL

Disposal of product residues and waste deriving from its use as well as empty containers must be in compliance with current local regulations, (EU: as per Leg. Decree 22 dated 5/2/97).
