Svencelė base colour

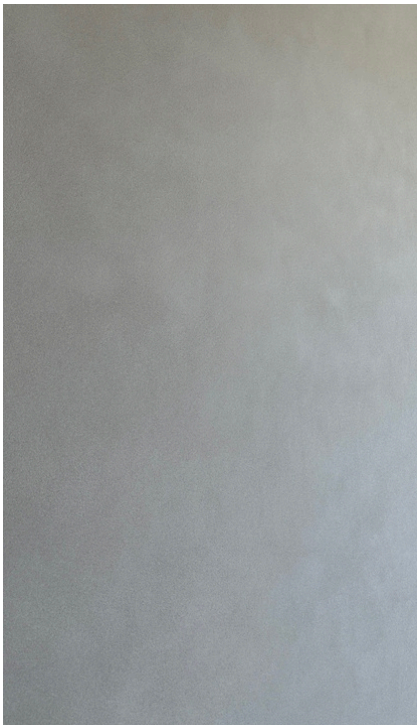

Decorative clay mixes are mineral-based products for the final finishing of residential and commercial interior walls. The products are natural, vapour permeable, absorb liquids, and are therefore only suitable for dry areas without direct exposure to water or fats. Additional varnish can be applied to improve durability.

"I founded Mr. Clay in Lithuania in 2016, and I am delighted that our products are becoming very popular not only at home, but also worldwide. Although clay plaster finishes used to be associated with specialised eco-building, I have always believed that natural finishes should not be niche or luxury products, they should be for everyone. Today's global trends and the shift towards sustainable living only reaffirm that our vision and team passion is on the right track."

- MR. CLAY founder Raimonda Radvilavičienė -
